DETAILED ACTION

Request for Continued Examination (RCE)

The RCE filed on March 31, 2008 has been processed. A non-final follows.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 2-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nikander (6,029,151) in view of Jacobsen (6,486,862).

Nikander discloses the invention substantially as claimed, as set forth in the previous Office Action. However, Nikander does specifically disclose a communication relationship between a respective interface of an Internet compatible communication terminal device or reading credit card information in a mobile communication terminal device with assistance of reader devices for credit cards or input devices. Jacobsen teaches a method for displaying information in a mobile device comprising a

communication relationship between a respective interface of an Internet compatible communication terminal device (col.2, lines 23-49; col.16, lines 10-57; and col.17, lines 18-22) and reading credit card information in a mobile communication terminal device with assistance of reader devices for credit cards or input devices (col.2, lines 23-49; col.16, lines 10-57; and col.17, lines 18-22). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teachings of Jacobsen within Nikander for the motivation of using the mobile device to access the Internet and using the card reader to pay for access.

Response to Arguments

The arguments with respect to claims 2-13 have been considered but are moot in view of the new grounds of rejection.
